

ELDORADO BROUGHAM
ELECTRICAL CIRCUITS

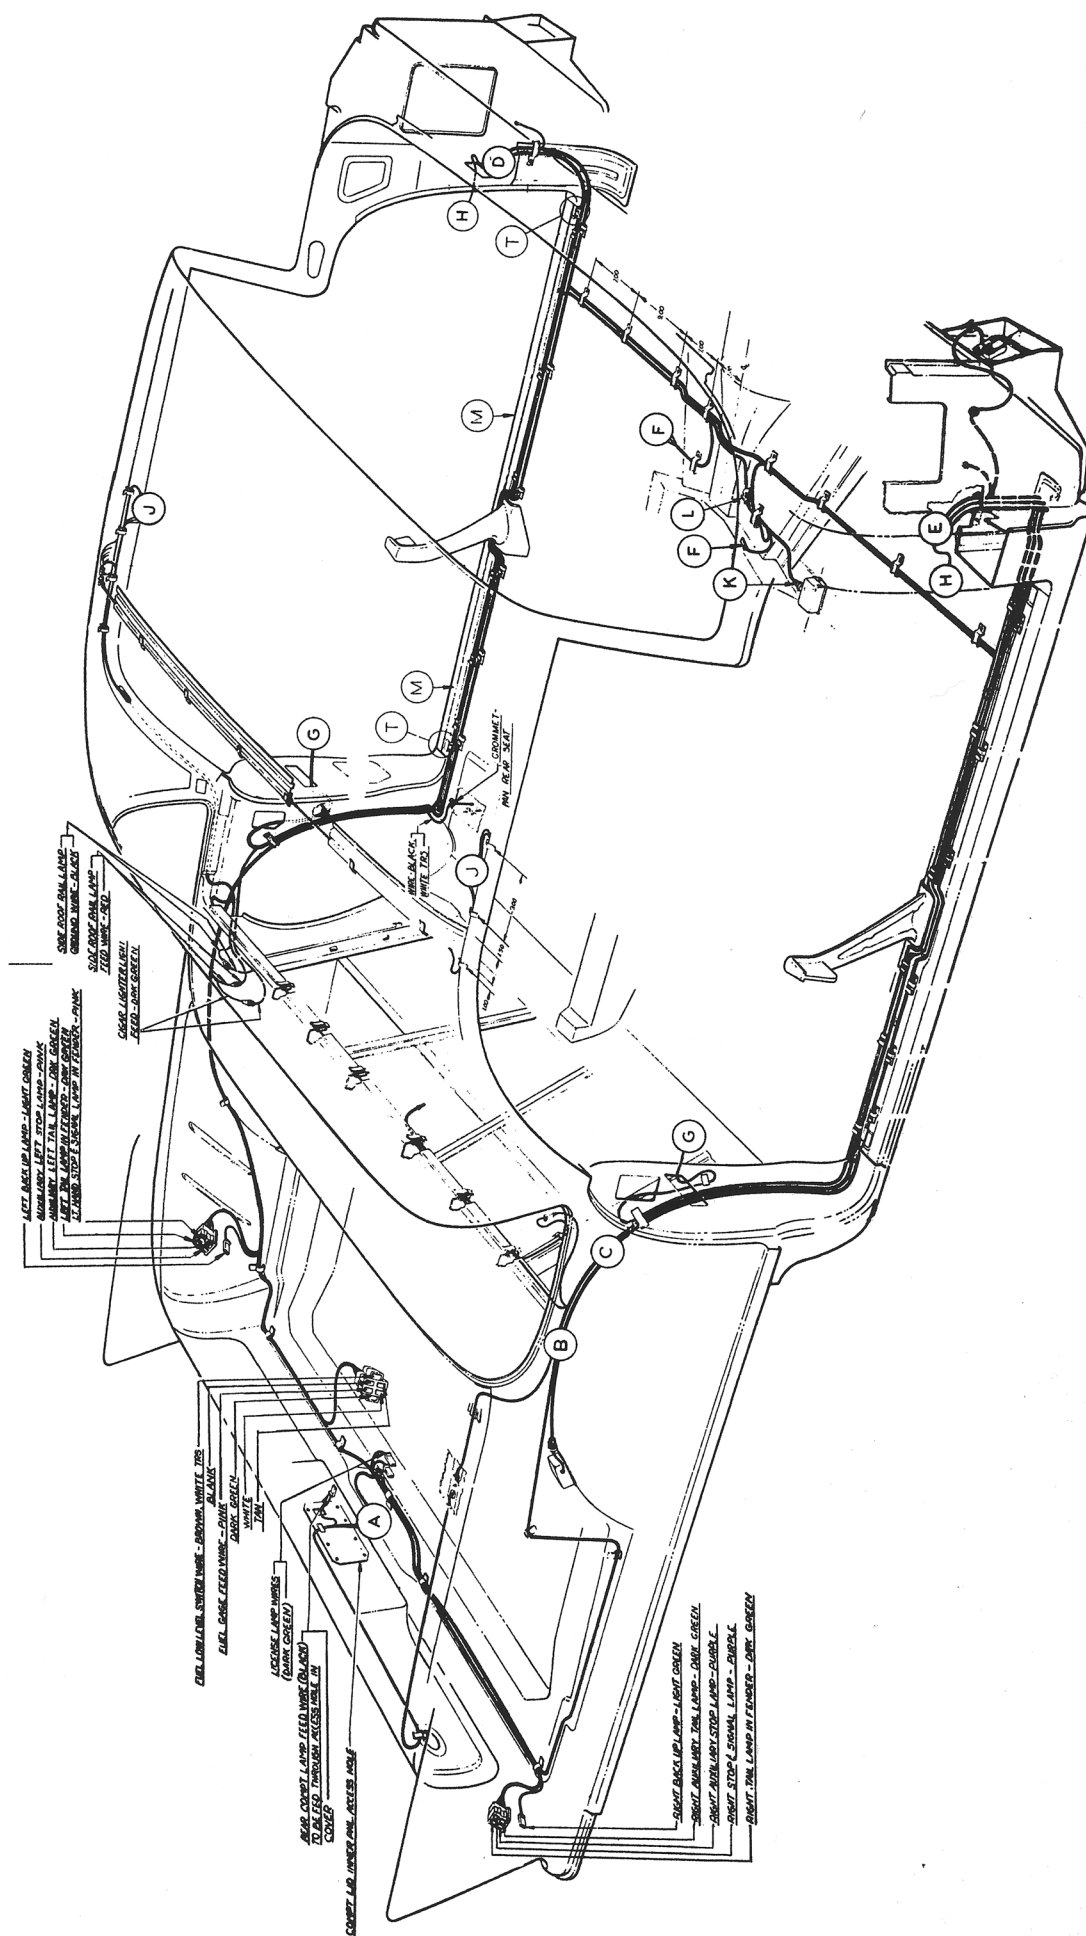

The enclosed Brougham service information has been compiled from current data, to be used as an aid in diagnosing an electrical circuit problem.

Also included is the Fisher Body master view of the harness routing, which provides an index to more detailed views, with wiring color noted for the actuating units.

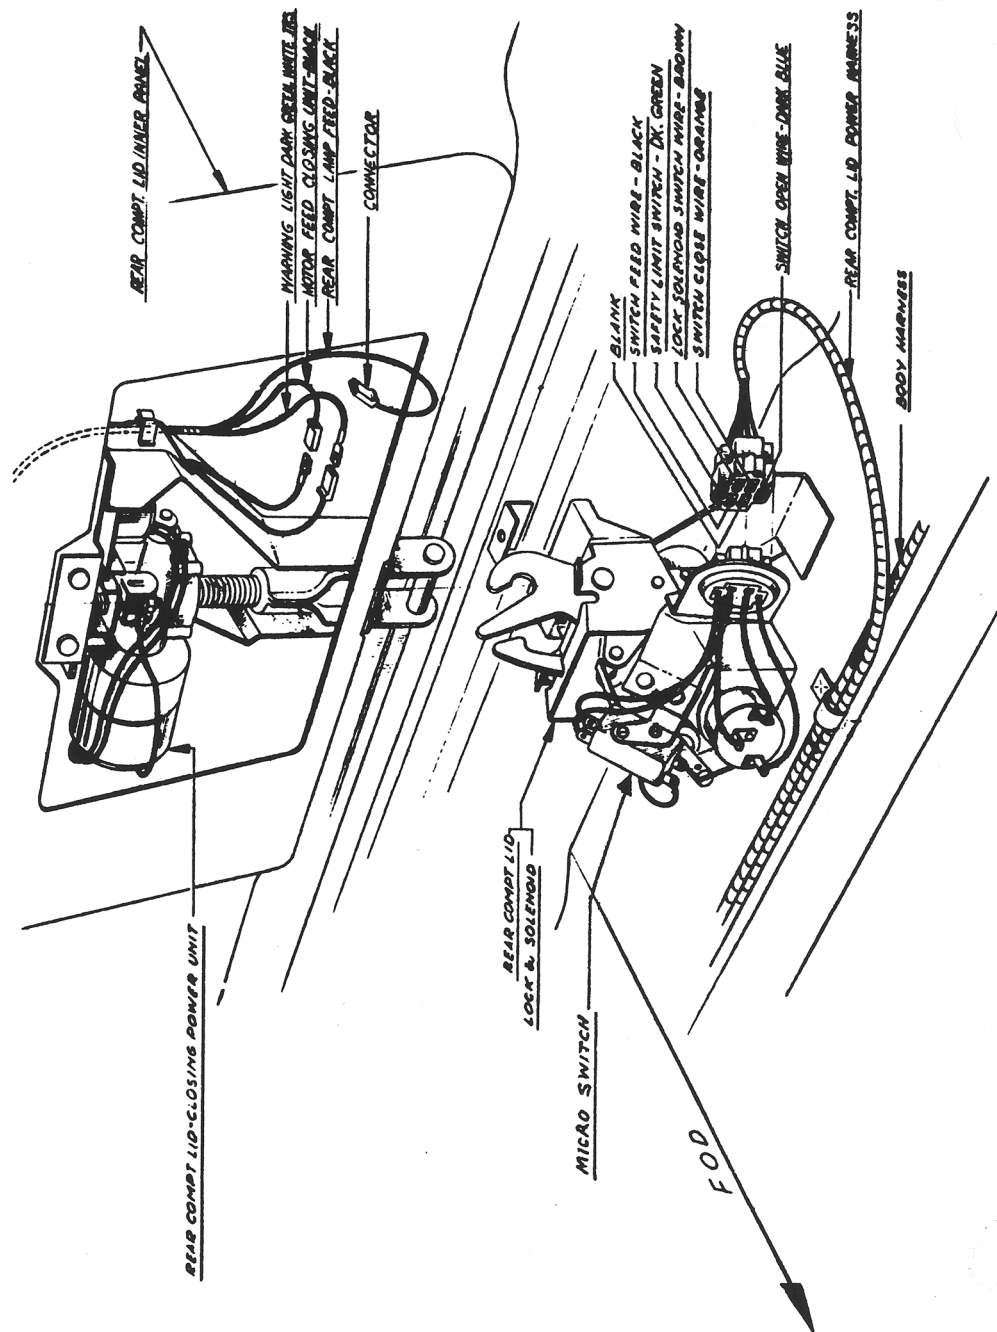

A production change in the chassis air ride circuit was effective at Engine Number 5770-146806, and is also being used on all 1958 Series Broughams. This diagram is included for your convenience.
